

# Renewable Energy: Development Appraisal Dashboard

Because we understand the fundamentals of the technology and the investment community we are able to harness this knowledge and create tools to demonstrate the dynamics of the deal.

The dashboard on the right was developed to make explicit the revenue streams arising from EfW technologies and to identify the key drivers of cost and profit. We have also developed a number of dashboards other clean technologies.

Invariably these dashboards are underpinned by 25 year cashflow models that allow us to breakdown in accurate detail key trigger points in the investment.

This all helps to devise what the investment strategy is to attract funders and also what and when the opportunities for exit are.
